## **10 YEARS OF GREEN ECONOMY IN ITALY**

### **The achievements and the strategic role towards 2030**

*The tenth edition of the States General of the Green Economy takes place on the eve of COP26 on climate and coincides with the launch of the National Recovery and Resilience Plan, and, more broadly, with the measures to relaunch the economy after the recession due to the pandemic. The green economy is the driving force of such recovery, which specifically aims to a Green Deal based on a circular and decarbonized economy, able to face the climate crisis and to promote a quality, long-lasting, and resilient development.*

*The next decade will be crucial to achieve climate neutrality, facing demanding changes in all sectors: energy, industry, transport, agriculture, construction, services.*

*The progresses of the green economy in Italy over the last decade show that we have the capacity and the potential to turn the challenges of the next decade into opportunities for development, investments, and employment.*

*The ecological transition and the digitalization should be addressed with an integrated approach. The ecological transition requires demanding measures and adequate resources: it is a unique opportunity what can turn into a great opportunity, to be managed with adequate measures and consistency.*
